[57] ABSTRACT

An improved disposable secondary grill for use with a primary or permanent grill to allow the barbequing of foods without contact with the surfaces of such primary grills. The improved secondary grill comprises a unitary body having top surfaces with openings therein to allow the passage therethrough of radiant heat, such openings being defined by bar-like strips having cross-sectional widths in the shape of an open C and lengthwise undulations to vertically space the food to be cooked from the surfaces of the primary grill.
